<sup>1</sup> These three satellites were brought up to the ISS on SpaceX CRS-5, launched on 10 Jan 2015. AESP was deployed by itself on 5 Feb 2015 by the J-SSOD, and the two Doves were deployed out of a single NRCSD on 3 March 2015.  
<sup>2</sup> A total of 28 Dove satellites were expected to be released, but the NRCSD failed partway through the deployment. 6 Dove satellites were returned to earth on SpaceX CRS-5.  
<sup>3</sup> Some primary and backup CubeSats were not ready for this launch, so these optical calibration CubeSats are just mass models with different coatings on the outside.  
<sup>4</sup> All satellites on these two deployments were brought to the station by the HTV-5, launched on 19 August 2015. SERPENS and S-CUBE were deployed by the J-SSOD deployer in mid September, the other satellites were deployed from the NRCSD in the beginning of October.  
<sup>5</sup> Two Flock-2b satellites were stuck in a NRCSD deployer and brought back down to earth.  
<sup>6</sup> This was a three-frequency TEC experiment.  
<sup>7</sup> Bevo-2 was deployed from an ISIPod inside AggieSat-4, which was deployed from the ISS by the Space Station Integrated Kinetic Launcher for Orbital Payload Systems (SSIKLOPS).  
<sup>8</sup> The Cygnus OA-6 launch on 23 March 2016 contained 16 Dove CubeSats, deployed via NRCSDs from the Kibo airlock on 30 May 2016. After the Cygnus was filled with trash and undocked from the ISS, it deployed 4 Lemur-2 CubeSats on 22 June 2016 before burning up. A 5th Lemur-2 CubeSat did not deploy successfully and also burned up.  
<sup>9</sup> BEESAT-4 was deployed on 9 Sept 2016 from the BIROS satellite, a 130-kg imaging satellite.  
<sup>10</sup> A 2U CubeSat (CAS-2T) was bolted to the upper stage of this rocket, and contained an amateur radio linear transponder.

<sup>1</sup> STARS-C was a tether experiment, with the 2U and 1U sections connected by 100 meters of tether. Each end contained a CW and data transceiver on separate frequencies.

<sup>2</sup> BY70-1 and LilacSat-1 radios are almost identical. They contain a FM to Codec2-BPSK transponder. Analog FM audio on the VHF uplink frequency is digitized to Codec2 and transmitted via 9600 baud BPSK on UHF.

<sup>3</sup> This CubeSat is basically a TubeSat deployer, with TANCREDO-1 and OSNSAT inside. They were deployed shortly after TuPOD deployed from the ISS.

<sup>4</sup> Columbia and Atlantis are identical satellites.

<sup>5</sup> ALTAIR-1 and SHARC were long CubeSats, which fit by themselves in the NanoRacks CubeSat Deployer (NRCS) 6U ISS Deployer, which is about 72 cm long.

<sup>6</sup> The BIRDS Project is organized by Kyushu Institute of Technology with five identical CubeSats from universities in Japan, Ghana, Mongolia, Nigeria and Bangladesh.
